Our customizable **School Health Services** online manual offers procedural guidelines to assist schools with the communication, planning, and evaluation of health services for students.

**Get acquainted with your school nurse, and keep kids safe in your classroom!**

**Serving.  
Delivering.  
Inspiring.**

## Supporting students' health for their educational success

### The School Nurse Corps at ESD 105 knows that healthy students learn better.

The priority of this program is to provide essential RN services to rural or remote school districts, helping them manage student health problems that can compromise learning readiness and classroom attendance. The program also provides support and professional development to all school districts. The School Nurse Corps achieves its goals for safe and healthy students by working under federal and state laws and regulations, and partnering with schools, families, and communities.

Our critical priority is to keep kids safe at school by:

- Developing emergency care plans
- Orienting, training, and supporting new school nurses, as requested
- Providing training and delegation of nursing procedures to school staff

## Our services

### The ESD 105 School Nurse Corps provides:

- Coordination of registered nurse services to selected small school districts in accordance with state-mandated eligibility and documented need.
- Consultation and information for all school districts regarding student health issues and school health systems.
- Monthly school nurse meetings for professional development and supporting school nurse practice.

### Lending Library

Our School Nurse Corps lending library is available to all school districts and community agencies in the ESD 105 region. Resource topics include:

- |                                    |                                       |
|------------------------------------|---------------------------------------|
